Take The LEED with Deluxe Building Products And SFIA

Leadership in Energy and Environmental Design

The US Green Building Council, LEED, is the nationally accepted benchmark for the improvement of sustainable design, environmental performance, and economic impact for commercial buildings. STEEL is rapidly being recognized for its important environmental attributes, particularly its high recycled content and reclamation rate. SFIA supports the increasing demands for LEED certification, operating with established and innovative practices, standards, materials and technologies.

SFIA presents the following LEED certification letters to meet your LEED-related documentary requirements for submission of Cold-formed Steel Framing Products, or for obtaining approval of SFIA specific LEED-related operations.

The US Green Building Council requires BOTH (1) compliance information for products used, and (2) a statement of the manufacturer's locations and efforts to preserve the environment through their operational actions. SFIA has a long standing relationship between our customers and their efforts of achieving LEED points with the use of Cold Formed Steel Framing Products. The attached letter is supplied to further assist you and minimize your efforts in gathering documentation for LEED-related projects.

Please present the following certification letter for all LEED-related projects on which you are bidding or for which your end customer is seeking LEED certification after installations are complete.
